

WILDCAT QUANT CAPITAL

DayTrader Bot — How It Compares

Own the bot for a one-time \$499. Optional AI Director \$49.99/month — cancel anytime. No per-trade fees, no revenue share.

Buy once, own it

No endless subscription to run the bot. \$499 today — it keeps trading for you, with free updates.

It's yours, end to end

Runs on your own PC and your own Alpaca account. Bring your own AI key (Claude, GPT, Gemini, Grok or local) — we never resell tokens.

Smart, and guard-railed

37 strategies vote on every trade; the optional AI Director reads the news & market regime and steers within hard safety limits.

Own it once vs. rent forever		What you get					
Typical 5-year software cost — we're a one-time buy; the rest bill monthly.		WildcatQC	Trade Ideas	Trend Spider	Tickeron	Composer	Quant Connect

		No per-trade fees / no revenue share	✓	✓	✓	✓	✓

WildcatQC = bot, one-time (AI Director optional, \$49.99/mo). Competitor figures use a representative annual tier x 5 years; higher tiers cost more. ✓ = yes · ~ = partial/limited · ✗ = no.

The biggest difference is the model: almost every tool above is a rental — stop paying and it stops working. WildcatQC is a one-time \$499 purchase that runs on your own machine and your own Alpaca account, and keeps trading whether or not you add the AI Director. Over five years that's roughly \$499 vs.

\$1,900–\$5,300+ for a comparable competitor tier — and you still own the bot. You also keep your data and your AI: trades log to your own database, and the optional AI Director uses the LLM and API key you choose, with no token markup or model lock-in.
